

## Bi-Folding Doors

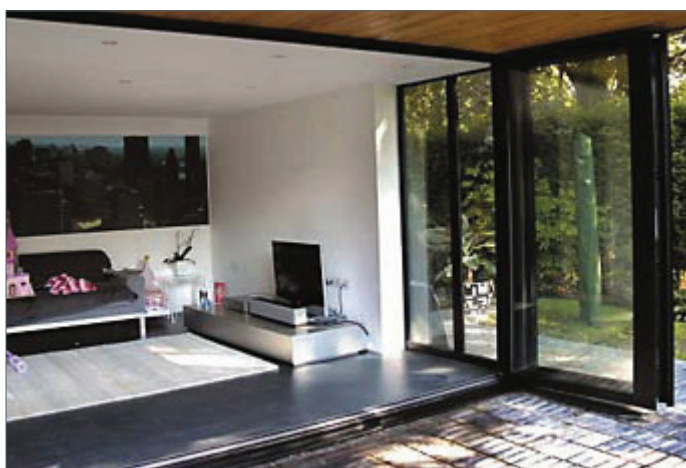

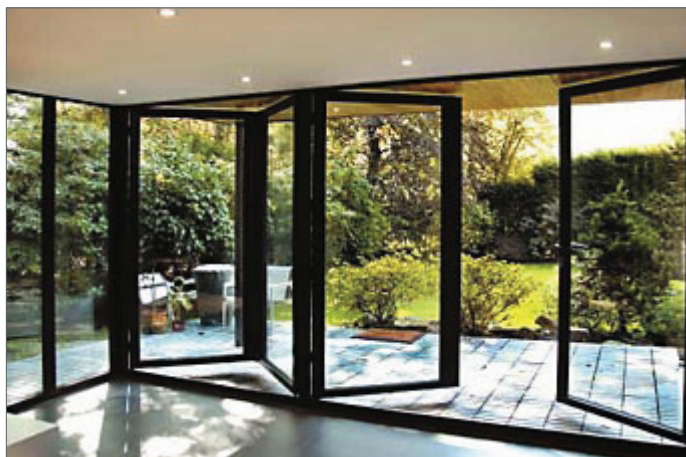

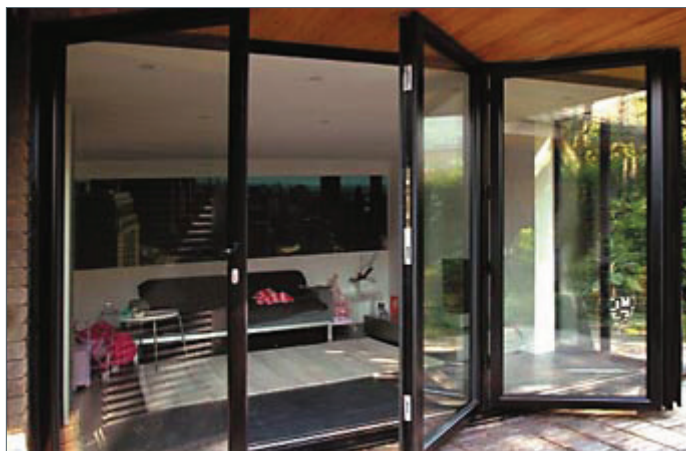

### Sliding, folding door

Would you like to open up a whole wall or open up two corners or even a balcony? Doors can be stacked open at one end, or at both ends, or one panel can be opened like a conventional single back door or a pair of patio doors. Choose the same colour for both sides, or a different colour for the side that faces into your room.

### FEATURES

- Aluminium construction - very low maintenance, no painting, no warping, no shrinking
- Security locking system
- Option of Inward or Outward opening doors
- Weather rating and thermally efficient
- Low threshold option for easy access

How does it work? The system is built up using a frame in which movable parts or elements are placed in such a way that it is possible to fold up the elements to the left or right. These elements or sashes are supported and hinged to a mullion. At the bottom the mullion is supported by a roller mechanism which slides along the cill profile while at the top, the mullion is guided by another roller mechanism. There are many possible combinations of elements and opening schemes.

### Our Guarantee to you

Here at Shaws, we are so confident in our products and installation that we offer you a 15 - year guarantee. So while the rest of the industry generally offers only 10 years, you'll have the peace of mind with Shaws of being covered for an extra 5 years.
