What does thermally broken mean?

Our system is one of the most thermally efficient systems available on the market.

Both internal and external components are completely isolated from each other by means of either polyamide strip, thermal barriers, insulation and isolators, so there are no cold bridges, thus reducing temperature transfer to a bare minimum.

Eaves Beam

Please make sure you notice these features when comparing us to other 'so called' thermally broken roof systems that are available on the market.

Eaves Beam

Another key feature bespoke to our system is that both the glass and glazing bar system does not project outside our eaves beam, i.e. reducing a cold bridge even further.

Eaves Beam

With lower thermal U values in mind our standard glazing material is 28mm double glazed units, with a centre pane U value of 1.2 W/m². This U value can be further reduced to an outstanding 0.7 W/m² by using 50mm triple glazed option (dependant on roof style).

Designing a roof to lower U values even further is achieved by maximizing glass area (maximum glass to aluminium ratio), i.e. the least amount of glazing bars possible.

Double Hipped Rooflights

Our rooflights are constructed from aluminium, and are fully thermally broken giving superior thermal efficiency coupled with low maintenance and stylish design.

We offer quality powder coated finishes to any standard RAL colour of your choice including dual colour (i.e. internal/external different colours).

Natural choice for natural light

Different internal and external profile finishes are available including square, ornate and raked features to suit your application.

Our rooflights are made to your specific size with pitches ranging from 15 to 45 degrees (30 degrees is our standard).

Our rooflights can accommodate a multitude of glazing options from 24mm double glazed to 50mm triple glazed units.

With our sleek yet robust components, large bar centres are achievable delivering maximum daylight penetration.

Rooflight opposite, displays our square bar feature which gives the look of traditional timber without the maintenance.

All our rooflights can accommodate our opening vents.

Glass Options

There's an abundance of different glass specifications to choose from.

Our preferred supplier is Pilkington Glass as they are an established company and household name.

Our standard specification for glass is 28mm Clear toughened double glazed units (with a centre pane U value of 1.2 W/m).

However, we do offer a 50mm triple-glazed unit option (with a centre pane U value of 0.7 w/m²)

Glass upgrades such as Activ Self Cleaning and also Activ Blue or Neutral (Grey) Solar controlled options are available just to name a few.

Glass samples and more technical information available on request.
