

PRODUCT BULLETIN

Eclipse trickle vent option

RPB24-03 | February 2024

Roseview
windows

Summary

From the end of February 2024 a new optional trickle vent system called **Eclipse** will be available to add to Ultimate & Heritage Rose sash windows.

Details

Eclipse is a discrete two-part external hood profile with integrated fly screen, which runs the full width of the window.

With Eclipse the internal trickle vent remains the same, routed through the frame. Eclipse then replaces the usual external trickle vent hood with an integrated full width drip cover and flyscreen, effectively masking the presence of a trickle vent from the outside.

The new concealed vent system attaches directly to the top of the window frame without adding any height, and completely masks the routed external trickle vent slot.

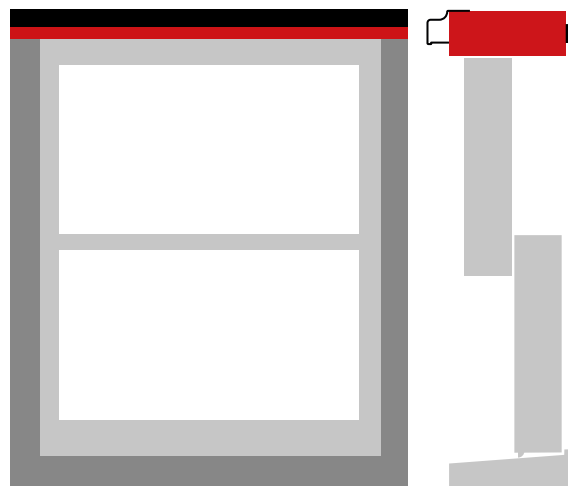

It can be cut back at the sides to fit behind brick or stone reveals, whilst having no internal projection that needs to be bridged with trims or architrave.

Eclipse can be matched to the same foil finish as the window, and comes pre-fitted when ordered.
